SW-F1

The SW-F1 allows you to take a picture with a simple step from your foot using our Dino-Lite or Dino-Eye digital microscopy solutions. The foot pedal is compatible with both DinoXcope for Macintosh computers and DinoCapture 2.0 for PC, making it a single accessory for all users (Not compatible with DinoScope and prior version of DinoCapture). There is no software CD required, simply plug in the device into your USB port and you can use it in conjunction with our Dino-Lite or Dino-Eye digital package.

The foot pedal is great for operators that require great attention on what they are handling. Great for doctors, assembly line workers, professionals, or casual users that require the additional ease of a foot pedal to take a picture.

Multipurpose USB foot pedal
A foot pedal control provide more convenience and productivity by assisting in tasks such as picture taking or locating the control in a more convenient location.

KM-01

The KM-01 allows control of the Dino-Lite microscopes* focus knob without touching the device. It can be used in specific conditions when the Dino-Lite microscope has to be isolated during use, such as: using it in a hazardous environment, when integrated into a machine, used in an enclosed space, and etc.

Controlling the Dino-Lite can be done by using a control box tethered to the KM-01 or use with DinoCapture 2.0 software. When using with DinoCapture 2.0, the knob motor can be controlled by the right and left mouse buttons the same way as the KM-01's control box; also, the MicroTouch on the control box works as a snapshot trigger to take pictures directly into the software.

* The KM-01 is compatible to certain Dino-Lite microscopes. Please consult your local distributor or reseller for compatible Dino-Lite models.

Touch control
With touch controls on the KM-01's control box, it provides instant response and more durability.

Usable with DinoCapture 2.0
The KM-01 can also be controlled with DinoCapture 2.0, version 1.4.1 or later, on PC. By using the right and left buttons on the user's mouse, the knob's rotation can be easily controlled, and the MicroTouch on the control box can be used for triggering the software to capture pictures.

Mountable
The KM-01 can be mounted to a 10mm diameter rod on Dino-Lite stands, such as MS35B/ MS36B or on custom made stands.

CD-Non-UVC

Windows Software NON-UVC VERSION for older legacy models

THIS IS THE NON-UVC VERSION FOR OLDER LEGACY MODELS (5+ years old with 3 digit model numbers; 211, 311, 411).

FOR CURRENT MODELS CLICK HERE

DinoCapture 2.0 software is included with Dino-Lite microscopes and can be installed on multiple computers. The DinoCapture software is frequently updated with new features and updates to keep it running optimally.

This purchase is available for users who require a replacement CD version of the software.

Please note:

- We highly recommend downloading the software instead at no cost whenever possible. This will provide users with instant access to the latest DinoCapture software as well as all future updates.
- If the computer requiring this software has no internet connection, try downloading the software from another computer and save to a USB drive to transfer the installation.
- Due to the frequent releases of updates, the CD version will likely be a previous version.
- Shipping and handling costs and shipping time apply to the purchase of the CD.
- For users still requiring the CD version, please make sure you select the correct version of the software as noted below.

There are 2 CD versions, please see the chart below to determine which CD you require.

MSAH292

C-mount adapter for Edge Series Dino-Eye

Designed for Dino-Eye: The MSAH292 is a specially sized fixed position C-mount adapter for our Edge Series Dino-Eye eyepieces. Instead of the adjustable design of our other C-mount adapter, the MSAH292 is designed to position the eyepiece at the specific location required for most C-mount video ports, industrial lenses, and borescope couplers.

This item comes with three parts:

A. The base tube is the longest of these. It has C-mount threading and three set-screws to lock the eyepiece in place. All setups will require this part and the use of one of the following collars (included)

B. Most setups will use the drop-in collar for a smooth, enclosed setup.

C. If your setup requires attaching the eyepiece and lens to a mount you can instead use the mounting collar. It includes standard tripod threading (¼"-20) in several locations for convenience.
